Henry Otuadinma

Senior .NET Engineer | C#, Azure, Microservices, React | AI | ML |
Health-Tech | Land Intelligence
Vilnius, Vilniaus, Lithuania

Summary

Tech Lead and Senior Full Stack Engineer with 10+ years of experience engineering scalable high-performance applications using C# .NET 8+, ASP.NET Core, NodeJS, ReactJS, Angular, TypeScript, and Azure. Expert in driving technology transformation and building mission-critical solutions that blend robust backend architectures with responsive, user-centric frontends. Proven ability to collaborate among cross-functional teams in Agile environments and take ownership of the full software lifecycle from architectural design to CI/CD automation, delivering high-performance data-intensive systems, bridging the gap between business goals and technical execution.

Experience

MB Adielivo

Founder & Principal Software Engineer

February 2026 - Present (7 months)

Vilnius

Built and operate Terrainica, a B2B SaaS geospatial intelligence platform helping property developers identify and assess land opportunities before committing capital.

- Took the product from concept through product discovery, architecture, implementation, infrastructure, production deployment, and continuous iteration.
- Own the full engineering lifecycle across .NET/ASP.NET Core, React, PostgreSQL/PostGIS, Python ETL, SQL and automated testing, including backend, frontend, geospatial data engineering and platform operations.
- Designed and operate the production environment on Oracle Cloud Infrastructure (OCI), Frankfurt, using ARM64 Ampere instances; responsible for Linux configuration, nginx, TLS, networking, storage, security hardening and deployment.

- Implemented zero-downtime blue/green deployments using templated systemd services and nginx upstream switching, with health validation, connection draining, instant rollback and online-safe database migrations.
- Built a GitHub Actions CI pipeline covering .NET unit/integration tests, Python ETL tests, frontend type-checking/linting, Playwright smoke tests, PDF-service testing and SQL integration tests against live PostGIS containers, using Docker and Testcontainers.
- Implemented production observability with OpenTelemetry and Serilog, with metrics, tracing and structured logs surfaced through Prometheus, Grafana, Loki and Promtail.
- Designed geospatial data pipelines and PostGIS-based spatial intelligence for parcel screening, constraint analysis, buildability assessment, risk evaluation and development opportunity discovery.
- Conduct ongoing production operations, infrastructure updates, troubleshooting, reliability improvements, data-pipeline refinement and product development, while validating the product directly with the Lithuanian real estate market.

PHIS3 (APIN Public Health Initiatives)

4 years

Senior Full-stack Engineer, Health Informatics

November 2021 - October 2025 (4 years)

Jabi, Federal Capital Territory, Nigeria

- Architected an Interoperability Module for Nigeria's Azure-based National Health Data Repository, enabling secured real-time transmission of millions of patient records nationwide via RESTful API, meeting strict product requirements for scalability and security
- Developed and maintained web-based applications using ReactJS and ASP.NET Core 8, building responsive Single Page Applications with customizable reports and complex data visualization that improved digital experience for the Federal Ministry of Health and all stakeholders nationwide
- Delivered solutions leveraging Microsoft Azure capabilities, including Azure SQL Database, Azure Functions, and Azure App Service, successfully handling high-concurrency data ingestion of millions of records while ensuring 99.9% uptime for mission-critical healthcare operations
- Implemented DevOps principles in coding, building, and deploying solutions by designing event-driven architecture with RabbitMQ and establishing CI/CD pipelines, resulting in 40% faster deployment cycles and improved system reliability

- Coded secure, efficient, and effective solutions for various challenges, including optimizing high-volume SQL queries that improved system response time by 32% and establishing rigorous xUnit testing suites to ensure overall system reliability
- Engaged with Product Owners to comprehend project requirements and translated complex healthcare interoperability specifications into technical solutions, ensuring alignment between business objectives and technical implementation
- Collaborated with the squad to deliver accurate estimations for timely project completion, leading scrum ceremonies, and coordinating with cross-functional teams to ensure on-time delivery of critical features
- Supported junior engineers through collaborative efforts and knowledge sharing, including pair programming sessions, code review mentorship, and troubleshooting support, directly improving team velocity by 25% and reducing technical debt

Senior Software Engineer

November 2021 - October 2025 (4 years)

Designed, developed, tested, deployed and maintained Azure-based health data repository serving over three thousand healthcare facilities across Nigeria, taking ownership of complex tasks and ensuring quality delivery throughout.

LeoPhoenix Tech

11 months

Senior .NET Developer

September 2024 - July 2025 (11 months)

United States

- Collaborated with other engineers to design optimized solutions for a mission-critical emergency response system, achieving a minimal defect rate upon first release by applying secure coding practices and comprehensive testing strategies
- Developed and maintained web-based applications with React and Angular 17 components, where applicable, integrated with ASP.NET Core 8 backend services, ensuring code reusability and maintainability through modular architecture
- Delivered solutions leveraging Microsoft Azure capabilities, including Azure App Service and Azure SQL Database for a cloud-hosted emergency response platform serving 10,000+ users

- Implemented DevOps principles in coding, building, and deploying solutions by engineering automated build/deployment pipelines via GitLab CI/CD, reducing deployment time by 40% and ensuring reliable delivery of new features
- Coded secure, efficient, and effective solutions by diagnosing and resolving critical application bottlenecks through CPU metrics monitoring and call stack analysis using Visual Studio Profiler and dotnet-trace, improving system response times for data-intensive operations by 15%
- Collaborated with the squad to deliver accurate estimations through sprint planning and capacity assessment, leading a team of 3 developers in Agile ceremonies
- Supported junior engineers through collaborative efforts and knowledge sharing by conducting code reviews, technical training sessions, and providing architectural guidance for complex features

Senior Dotnet Developer

September 2024 - July 2025 (11 months)

Owned complex development tasks end-to-end as Technical Lead, evaluated and recommended technical solutions, and mentored developers in a fast-paced Agile environment.

CIHPNG

Lead Software Engineer, Health Informatics

June 2019 - November 2021 (2 years 6 months)

Jabi, Federal Capital Territory, Nigeria

- Developed and maintained web-based applications, including "Jolly95," a React Native mobile application fully integrated with a .NET backend that improved patient retention by 20% through enhanced appointment scheduling capabilities
- Delivered solutions leveraging Microsoft Azure capabilities by leading strategic migration of legacy systems to a unified Azure data warehouse, consolidating data from 156 facilities into a single source of truth
- Built robust ETL pipelines to ingest clinical data from disparate EMR systems.
- Coded secure, efficient, and effective solutions by implementing Single Sign-On (SSO) authentication across the enterprise application suite, reducing login-related support issues by 40% while enhancing security posture
- Engaged with Product Owners to comprehend project requirements for mobile application features and enterprise integration, translating business needs into technical specifications

- Communicated clearly and concisely with the squad and stakeholders, including healthcare administrators, IT managers, and end-users, to ensure alignment on technical solutions
- Supported junior engineers through collaborative efforts and knowledge sharing in React Native development patterns, .NET integration techniques, and Azure cloud services

CENTER FOR INTEGRATED HEALTH PROGRAMS

Lead Software Engineer

June 2019 - November 2021 (2 years 6 months)

Delivered internal software applications in C# and .NET, led code reviews, mentored developers, and collaborated closely with business analysts and stakeholders.

University of Maryland Baltimore - School of Graduate Studies (MGIC, Nigeria)

Associate Software Developer, Health Informatics

October 2017 - March 2019 (1 year 6 months)

Jahi, Federal Capital Territory, Nigeria

- Developed and maintained web-based applications by refactoring legacy Web Forms applications into modern React and .NET Core architectures, enhancing maintainability and user experience for national-level identity management systems
- Coded secure, efficient, and effective solutions for national health system integration, developing robust .NET APIs that improved interoperability efficiency by 30% for data exchange between disparate systems
- Integrated SignalR to provide real-time dashboard updates for the Federal Ministry of Health.
- Collaborated with the team in Agile ceremonies, including daily standups, sprint planning, and retrospectives to ensure consistent delivery of high-quality features
- Wrote tests using xUnit and participated in code reviews to maintain code quality standards and ensure comprehensive test coverage across the application

Chams Holdco

Senior Software Developer

June 2016 - March 2017 (10 months)

Lagos Island, Lagos State, Nigeria

- Facilitated a 28% increase in state tax revenue by delivering a secure biometric profiling system for accurate identity verification.
- Drastically reduced system latency by refactoring legacy code and optimizing LINQ logic.
- Enhanced desktop UX using WPF and XAML to create responsive interfaces.

Maxfront Technologies Ltd.

Senior Application Developer

June 2014 - March 2016 (1 year 10 months)

Lagos State, Nigeria

- Designed and deployed enterprise applications using ASP.NET MVC and AngularJS.
- Significantly improved client system performance through database optimization.
- Effectively handled defects and iteratively improved system features by aligning customer feedback with system goals.

xPlug Technologies Limited

Software Developer II

June 2013 - May 2014 (1 year)

Lagos State, Nigeria

- Designed, developed, and regularly updated the features of applications according to specifications using C#, ASP.NET Web Forms, WPF, WCF, jQuery, HTML5, CSS3, and MSSQL
- Effectively collaborated with senior developers to measure progress and solve challenges.
- I tracked the performances of deployed applications to ensure compliance with requirements.

Education

VILNIUS TECH - Vilnius Gediminas Technical University

Master's degree, Artificial Intelligence Engineering · (September 2025)

University of Nigeria, Nsukka

Bachelor's degree, Electronic Engineering · (September 2006 - July 2011)

University of Nigeria, Nsukka

Bachelor of Engineering, Electronics
